

PAROS STUDY IMPLEMENTATION IN BANJARMASIN

Abdurahman Wahid

Introduction

- Capital of South Kalimantan
- Area: 27.8 sq miles
- Hospitals: 7 units

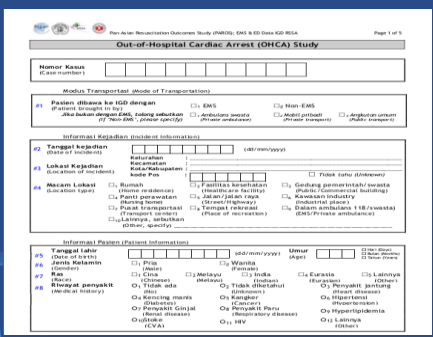

Strategies for collecting data

- Instruments: translated instruments from Malang (PAROS Form 7)
- Team work:
 - Coordinator: Abdurahman Wahid
 - Data collector: 9 student from nursing school
 - Volunter on site: 2 nurse for each hospital

Page 1 instrument

The screenshot shows a form titled 'Out-of-Hospital Cardiac Arrest (OHCA) Study'. It includes sections for 'Informasi Transporasi (mode of Transportation)', 'Informasi Kejadian (incident information)', and 'Informasi Pasien (Patient information)'. The form contains various checkboxes and input fields for data collection.

Challenges

- Cardiac arrest event: REAL but not recognized
- No Resuscitation attempt in pre hospital
- NO public AED

Strategies

- Improving Community Alert for Cardiac Arrest Event
- Improving Community Skill for CPR and AED
- Government policy: AED & EMS system

Implementation

- Initiate nursing students group (TENSI: Team of Emergency Nurse) to get involved in PAROS study (2014)
- Community education to improve recognition of Cardiac Arrest in Landasan Ulin (2014)
- CPR training for students in 4 High schools and 4 colleges (University Grant 2014)
