

## FEEDBACK ON DISPATCHER-CPR MODULE

### Issues/ Concerns with Variables- Singapore

- Time elapsed before dispatcher addresses caller (clock time vs time elapsed)
- Barriers to CPR (suggest add box for "None" – otherwise don't know if it's missing data, or it's no barriers)
- If Barriers occurred (suggest add box for "NA" if no barriers – same reason as above)
- Dispatch: Time measures (entire box) (clock time vs time elapsed) (Add Y/N/UNK to all fields before time)
- Cardiac arrest before arrival of EMS? (reword)  
Suggest:  
Before call  
After call, before arrival of EMS  
After call, after arrival of EMS

### Issues/ Concerns with Data Collection- Singapore

- Lack of manpower for data entry at dispatch centre

### Issues/ Concerns with Data Entry/ e-PAROS Platform-Singapore

- Time of call: allow automatic skip to next box, or have 1 box, not 3
- Reorder sequence of questions:
  - PAROS Case number (Official/PAROS HQ use only)
  - Agency
  - Agency Incident no
  - Date / time of call (clock time)
  - Address
  - Transfer call
  - Time elapsed before dispatcher addresses caller
  - Cardiac arrest before arrival of EMS?
  - Dispatch: Patient
  - CPR already in progress?
  - CPR instructions started?
  - CPR compressions performed?
  - Dispatch: Time measures
  - Barriers to CPR
  - If Barriers occurred
  - Dispatch: Comments

**Questions Regarding Full  
Implementation of PAROS 2-  
Singapore**
