

FEEDBACK ON DISPATCHER-CPR MODULE

TAIWAN perspective

Patrick Cl Ko

Issues/ Concerns with Variables- Taiwan

- ▶ Dispatch ID/Name: ID would be more proper than Name. We may not record their names.
- ▶ What is the definition of delayed starting of CPR instruction?
- ▶ Time to First Rescue Breath: for CCC CPR system, not necessary for this item.
- ▶ Cardiac arrest before EMS arrival: by paramedic report or by dispatcher? -> by paramedics ?!!

Patrick Cl Ko

Issues/ Concerns with Variables- Taiwan

- ▶ The definition/meaning of "Secondary Breathing Assessment"?
- ▶ The meaning of "Language Line Used" for Barriers To CPR?
- ▶ Age may not certainly available by voice record, but will be available after conjunction to EMS data.

Patrick Cl Ko

Issues/ Concerns with Data Collection- Taiwan

- ▶ For transfer call, the time elapsed before dispatcher first addressed caller may not be available in our system. We separate emergency call codes from 119 for ambulance and 110 for police.
- ▶ Consciousness: yes, no, unknown, -> we add "no check" and its reason why.
- ▶ Breathing normally: yes, no, unknown, -> we add "no check" and its reason why.

Patrick Cl Ko

Issues/ Concerns with Data Entry/ e-PAROS Platform-Taiwan

- We currently still use our e-file, not enter e-PAROS Data Platform yet. Human-resource issue will be the concern.
- Similar to previous PAROS 1, could PAROS set a file format for recoding & merging the data file, instead of re-entering.

Patrick Cl Ko

Questions Regarding Full Implementation of PAROS 2-Taiwan

- Any financial resources for maintaining the evaluations of audio recordings, data entry, education promotion, & media promotion?
